***Allowable Subject Matter***

1. Claims 1-35 contain allowable subject matter over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a recording medium. The independent claims identifies the feature of the "additional information which indicates that a first data stream and a second data stream comprised a third data stream before being divided by editing/re-recording, wherein the recorded information is stored in one of the manufacturer information field, the search information field, and the linking information field". And furthermore, the feature of the "determining if the contiguity information which has been recorded at the time of editing/re-recording indicates that the first data stream followed and was combined with the second data stream before being divided; and updating the contiguity information so that the first data stream again follows the second data stream in a reproduction sequence". The closest prior art, Kim et al (PN 6,470,135) discloses a conventional apparatus for recording digital data streams, either singularly or in combination fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2616

Kim et al (PN 6,470,135) discloses an apparatus for recording digital data streams.

Kim et al (PN 6,789,072) discloses an apparatus for searching recorded digital data streams using packet arrival time information.

Moon et al discloses a method of generating information for fast searching of packet data recorded on a recording medium.
